

Copperizers

Amsax designs and fabricates **Copperizers** for the manufacture of MIG wire. We build in line cleaning and plating units that are fully integrated with wire drawing machines. Amsax fabricates **Copperizers** from Co-polymer European Gray Polypropylene. Our tanks are fabricated with bent corners and butt welded walls and floors for strength. Our units will not crack or shatter nor will they discolor. We use thermoplastic piping made from PVC, CPVC, PVDF, polyethylene and other exotic metals. Amsax has been supplying equipment to the Weld Wire Industry for over a decade.

- Flexible modular design allows for the line to be optimized meeting your unique requirements.
- **Copperizers** are engineered to be used inline with a range of wire drawers and take-ups.
- Process can be set up for a variety of chemistries and with automatic chemical additions.
- Environmentally friendly design minimizes chemical and water consumption.
- Simplicity for maintainability and easy operator access.
