

Environmental Systems

Amsax designs **Environmental Systems** to compliment our equipment or we can supply a stand alone system for your current installation. We can integrate new, used or existing equipment into an Air Ventilation System or Wastewater Treatment Plant. We work with you and government agencies to design systems that will meet or exceed code. Amsax will follow up with testing to validate performance and insure the installation meets code. We have delivered a range of systems around the world for over a decade. Our **Environmental Systems** are built tough for *Real World* Industrial Environments. We use only top quality materials. Amsax won't cut corners and will engineer your **Environmental System** so it operates reliably with the flexibility to meet your current and future requirements.

Air Ventilation Systems

- Complete line of Air Ventilation Systems with fume extraction, demisters and / or air scrubbers.
- Environmentally friendly systems minimize chemical consumption.
- Custom fabrication and installation that can handle a wide range of acid and caustic air streams.

Wastewater Treatment Plants

- Wastewater Treatment Plants utilize a variety of technologies including reverse osmosis, precipitation and ultra filtration.
- Custom solutions that can treat a wide range of chemical waste streams including acids, caustic solutions and heavy metals.
- Environmentally friendly design minimizes chemical consumption and effluent discharge.
- Metal Recovery Systems to capture valuable metals and reduce loading on the waste stream.
